THANK YOU

For elevating our healthcare knowledge at these vibrant booths!

Patient Advocacy & Support Office (PASO):

Staff not only learned about PASO's work in the healthcare setting, emphasising the active involvement of patients and their families in healthcare initiatives, but also gained insights into how patients and family partners participate in decision-making processes and contribute to improving patient care.

Visit **NUHS Intranet Portal > Patient Advocacy and Support Office> Caregiver Resources**, the centralised platform for information on caregiver training, financial assistance, support groups and more.

Fall Prevention

Through participating in interactive games related to fall prevention, staff learnt the importance of fall prevention in healthcare as well as the Morse Scale assessment for assessing fall risk. Keep a look out for the new Fall Prevention posters in JCH that help nurses communicate with patients about safety, particularly in the toilet.

Transitional Care (Hospital to Home) and Community Care Team (CCT):

Have you wondered what is transitional care, specifically the transition from the hospital to the home setting?

Staff who visited the booth learnt about the roles and responsibilities of the Community Care Team (CCT) in a community setting, whose roles include managing the conditions of patient, coordinating care, ensuring medication adherence, providing health education, and facilitating support services for patients post-discharge.

These are crucial roles to ensure the continuity of care for patients, aim to prevent hospital readmissions and improve patient outcomes.

Experiencing Frailty, Their influences & How to Address them

Allied Health staff came together to give participants a chance to understand medications exacerbating dizziness, sub-nutritional food choices elderly often make, and what it feels like to complete an unassuming activity while being frail. With these experiences, participants were made able to recognise generic management strategies that they can relay to all frail-risk people around them in the future.
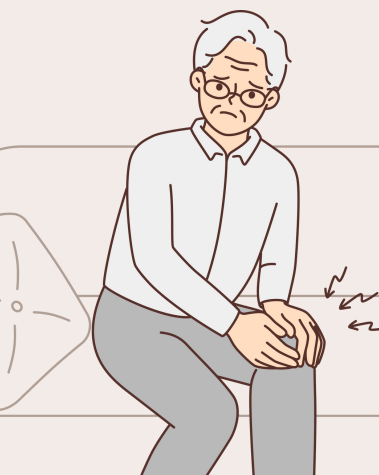

OneNUHS App

Staff had the opportunity to participate in the OneNUHS app challenge where their knowledge of the app was tested and feedback collected, all of which would go towards improving the app functionality in future releases.
